Tongue & Groove Set  
**SALE: \$109.90**

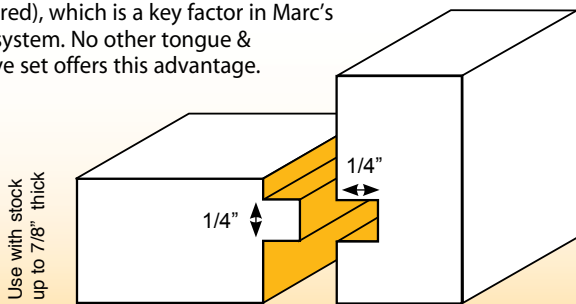

Historically, fine European cabinetmakers always appreciated the strength and accuracy of the mortise and tenon joint. In today's world of tight budgets and even tighter schedules, however, the idea of fitting two pieces of wood into an interlocking joint seems too slow, so we often settle for less. Well, there's no need to compromise quality for speed any more!

The Sommerfeld Tongue & Groove Cabinetmaking System combines the best of Old World joinery with New World tooling. The result is a system that is fast and easy, yet accurate and strong. Marc's unique system combines the new Tongue & Groove bit set shown above with the Easy Pocket pocket hole jig on the facing page. The tongue and groove provides accuracy and strength where it is crucial, and pocket hole speed and ease where it is practical. The photos and illustrations at right give you an overview of this new approach, and Marc's new *Cabinetmaking Made Easy* DVD shows you every detail.

The Three-Bit Tongue and Groove Set includes carefully-matched bits that cut a 1/4" x 1/4" tongue. Unlike other tongue and groove sets, these bits offset the tongue to one side of the joint, making it ideal for Marc's new techniques. The set also includes a flush trim bit to remove portions of the tongue, as shown in the second photo at right. Be sure to check out the Easy Pocket Joinery System. It's the perfect partner in the new Sommerfeld Tongue & Groove Cabinetmaking System.

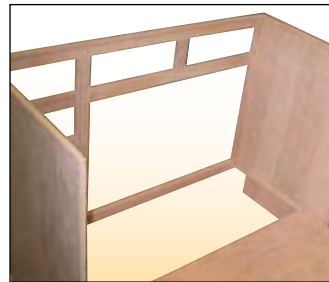

This set features a tongue that is offset (not centered), which is a key factor in Marc's new system. No other tongue & groove set offers this advantage.

## A new system built upon classic principles:

The tongue and groove joint is used in virtually every step of Marc's new cabinetmaking technique. Grooves are routed in the backs of frame elements, tongues are routed on ends, floors and dividers. Then the Easy Pocket takes over, producing strong, attractive face frame joints.

Occasionally portions of the tongue must be removed, as in the case of the cabinet divider at left. This is accomplished in just a few seconds using the Flush Trim Bit included in the Three-Piece Set.

The Easy Pocket is the perfect complement to the Tongue & Groove Set. Besides making great face frame joints, it provides a fast, accurate means of attaching bottoms, sides and dividers to the face frame. Every pocket hole joint is completely concealed.

The Tongue & Groove joint is used in every element of the cabinet, even the back rails.

The Easy Pocket and the Tongue & Groove Set team up to make cabinet work faster, easier and stronger - check out the corner braces at left.

The result of these innovative new ideas and products is a beautiful, solidly-built cabinet. Better still, it is a method that is fast, efficient, and easy to repeat, whether you are building a single cabinet or an entire kitchen.
