

The Finest Self-Tapping Pocket Hole Screws

The perfect screws for the Easy Pocket shown below

- Specially designed for pocket holes
- All screws have a self-tapping auger point that eliminates pilot holes
- All screws have a #2 square drive recess
- All screws are industrial grade - case hardened to eliminate breakage

Two head types:

- **Deep Pan Head:** provides a flat bearing surface under the head for seating in the pocket hole. Our heads are thicker than the average screw where the head joins the shank, helping to prevent breakage. Pan Head screws are used mostly in face frame assembly.
- **Washer Head:** This oversized head is our most popular cabinet assembly screw. The large washer bearing surface is especially useful when fastening soft materials, plywood, MDF & other man-made materials.

Two thread types:

- **Fine Thread:** used exclusively in hardwoods.
- **Coarse Thread:** used in softwoods, plywood, MDF and other man-made materials.

Two lengths:

We only offer two lengths - 1-1/4" and 1-1/2", because of the unique adjustability of the Easy Pocket Jig. We recommend the 1-1/2" length for face frames.
