

3-Pc Tongue & Groove Cabinetmaking Set

Build stronger, better-fitting cabinets with less work, using Marc Sommerfeld's fail-safe Cabinetmaking System and these bits

HALF-PRICE

This special matched set of bits is the very foundation of Marc's work-saving, common sense approach to cabinetmaking. The way you build cabinets is about to change!

Our woodworking, cabinetmaking, and furniture-making tools in this country were all derived from Europe. The joints that were mainly used are mortise and tenon, tongue and groove, and stile and rail – all strong joints that take time to construct. The building of cabinets in the United States has evolved into the use of simple butt joints done by face nailing or pocket screwing. These joints may appear to be faster and easier to construct, but are most certainly not as accurate, nor as strong, and they are much more unsightly than the old traditional ones.

With the SOMMERFELD'S Tongue & Groove Cabinetmaking Set, we came up with a system that combines the best of that Old world joinery with our New World tooling. The results of this new method now make your cabinets not only stronger, but much more accurate, plus assuring you of that all-important hidden interlocking joint, along with surprising ease and quickness. Here's a quick overview of how it works:

- ▶ Grooves are routed in the backs of all face frame pieces before they are assembled. Tongues are routed on the fronts of the side panels, floors, and partitions.
- ▶ Grooves are also cut in the backs and tops of the side panels for placement of corner blocks, and nail rails that have been previously cut with tongues.
- ▶ The Tongue & Groove joint is used in virtually every step of Marc's new cabinetmaking system, which you can master yourself by viewing his DVD Cabinetmaking Made Easy.
- ▶ The big key to this whole system is that both the Tongue & Groove bits are a perfectly-matched pair in height. This allows repeated
