

Special profile 4" Mitered Molding Bit

Turn 3" wide stock into an attractive molding profile for framing cabinet doors, furniture panels, picture frames and lots more

Before now you had to pay high, custom-tooling dollars to get this elegant look on a mitered raised panel. After you've made your first set of doors with your new mitered molding bit, your work will be the admiration of all your woodworking friends.

- ▶ We advise using Sommerfeld's Tongue and Groove Cabinetmaking Set with this bit to make your mitered doors. For those of you that don't have our tongue and groove set, we have the new pro set shown on page 15, which includes all 4 bits needed to create your mitered raised panel door.
- ▶ The center-point turning of all our bits ensures that this extra long bit (4") is perfectly balanced with no run out to produce professional quality cuts.
- ▶ We advise cutting 3" wide stiles and rails for building your mitered raised panel doors.
- ▶ Detailed instructions for making mitered raised panel doors included in the Cabinetmaking Made Easy DVD.
