

# 3-Pc Glass Panel Door Set

Make any type glass panel door quickly and easily with this versatile bit set and the instructions in Marc's HOW-TO Glass Panel DVD

**Straight glass panels, arched glass panels and divided light doors with muttons & mullions are all a breeze with this bit set**

The unique glass panel set can make any type of glass panel door you need: regular glass panel, arched glass panel, or divided light doors with muttons and mullions.

The glass panel doors utilize a rubber panel retainer that secures the glass in a 1/8" slot. All of the possibilities are covered in depth in Marc's DVD, Glass Panel Doors Made Easy.

Rail & stile cutters leave you with a square rabbet on the inside of your door frame for installing the glass.

The pattern cutting bit has a unique feature with its two bearings: the bearing in the middle of the 2 cutters gives you a guide while cutting with the grain. The bearing at the top is for use with templates to make arched glass panels.

The slot cutter cuts the slot for the glass panel retainer.

All of our bit sets are packaged in a beautiful, custom-designed hardwood case to keep your bits safe, clean and easy to find for many years of service.

Machines materials from 3/4" to 7/8" thick

Bit height set-up is a breeze with our Easy Set Jig

Here's how it works: Mill the cope and pattern cuts first, then use the slot cutter to cut the groove for the rubber panel retainer. The edge of the pattern cut will ride on the bearing of the slot cutter bit. When you cut the slot in the rails, you can cut the slot the full length of the stock. When you cut the slot in the stiles, you need to set up reference points to stop and start the cuts so they are hidden from view on the top and bottom of the doors.
