

SOMMERFELD'S TOOLS
For Wood

Massive, 36" x 27" aircraft carrier-sized Router Table is a breeze to use and built to last!

Large workpieces or small, this 45# Table and its 48" long Fence will handle them with ease and precision

Marc Sommerfeld's Router Tables Made Easy DVD. In this DVD, Marc leads you step-by-step through building this great cabinet for your new Router Table System. Plus...pick up loads of great tips and secrets from one of America's leading cabinetmaking experts.

FREE How-To DVD A \$9.90 VALUE

You'll learn how to...

- Assemble your new Router Table System
- Build a 10-drawer, raised panel router table cabinet
- Use the fast, easy tongue & groove method of cabinet construction
- Cut & assemble dovetail drawers
- Install drawer slides, hinges & handles
- Make raised panel doors and drawer fronts
- Mount your new Router System to the cabinet
- Mount your Router System to a table saw

When you're finished, you'll have a fantastic, practical cabinet for your Router Table System!

Designed by Marc Sommerfeld and extruded in the USA... it's true, dimensionally stable and a joy to use.

Router tables are amazingly versatile tools. But they're only as good as they are true, dimensionally stable in changing environments and simple. For example.....

- ✓ The trueness of tables made from glued-up hardwoods or laminate-covered composites can be affected by changing environmental conditions. Not ours!
- ✓ Small tables and fences don't provide adequate workpiece support, allowing the stock to move off-path, ruining the cut. This system is ULTRA supportive.
- ✓ If adjustments aren't fast and simple, valuable production time will be lost. There's no alignment required, no scales to read and only one Knob to twiddle with Sommerfeld's Router Table System. Nothing could be easier.

This System is clearly DIFFERENT

The Table is shipped as three "9" W x 36" L, extrusions that you join together with precision aluminum tongue & groove joints and six bolts. The entire process takes less than an hour...plus the small amount of time it requires to attach your router base to the tabletop (practically zero with our Triton routers).

Once assembled, chances are, you'll be awe-struck by its giant size, handsome gold-anodized finish and how easy it is to use. Set the 19 lb. Fence on the Table surface. Slide the hex head of the Fence Tightening Knob bolt into the left side T-slot...maneuver the opposite end of the Fence a bit until the spring-loaded Pivot Pin pops into its hole...and you're just about ready.

Install a bit and adjust its height. If your task calls for using a piloted bit, swing the fence in or out and use a straightedge to align the O.D. of your bit's bearing with the Sub Fence face. Now, you're ready to...

...prove everything we've said...in your own shop

Make Zero Clearance Fence Inserts to match your bits. 3 blanks included.

Solid, 1/2", 3/4", 1", 1-1/4", 1-1/2", 2" & 2-5/8" twist-lock Insert Rings & Spanner Wrench included

Our full-featured Triton 3-1/4 hp Routers are ideal for use with this Table - SEE PAGE 10

Marc's ingenious bent Collet Wrenches let you change bits fast without changing router height

Lift Crank hole for Triton 2-1/4" Routers already bored in Tabletop

90-DAY Money Back Guarantee
